

# FTTP

**Get ready for our fastest,  
most reliable connection ever.**

**Say goodbye  
to buffering,  
bottlenecks  
and boredom.**

Say hello to breakneck speed, and enough bandwidth to keep the whole team happy. Introducing FTTP (Fibre to the Premise) whatever you need your connection for, with ultrafast FTTP you'll do it faster, smoother, more reliably. From video calls to collaborating with clients, file sharing to cloud computing, this is connectivity built for the future, today. And when a leased line connection is just out of reach, ultrafast FTTP gives you the high bandwidth, high performance connectivity you need at a fraction of the cost.

## **Streaming, working & gaming**

You're all set for an ultrafast future. With FTTP there's no compromise on speed for the busy family, you can work while they stream everything from 4k movies to online games. You have everything you need to achieve YouTube superstardom, so whatever your streaming needs we've got you covered.

## **Fibre at the speed of light**

Both download and upload speeds are significantly quicker than standard broadband. Fibre broadband comes in two variations – FTTP where the entire connection is fibre-optic cable, or FTTC (Fibre to the Cabinet) where just a portion of the connection is fibre-optic. For FTTC, the final part of the connection runs from the green BT street cabinet to your home.
